## PROJECT

Design for Park Locations Website

07.2022-11.2022

In a team of 5 people, create a website called park location based on data provided by Brisbane City Council.

- Participated in the proposal of early concepts and completed the minimum viable product.
- Use the Google Map API to combine with the database to display matching park locations in Brisbane.
- Use ArcGIS pro to navigate between two points on the map

English Learning Software Development

02.2023-11.2023

Starting from users researches then developed a game based English learning mobile app. The main purpose of the software is to increase user immersion while reducing learners' stress and foreign language anxiety

- Conduct research on target users through online questionnaires and interviews
- Use Figma to design product prototype UI page
- Use Adobe Illustrator to design product promotional posters
- Use C# language to develop software for Android platform on unity5

Netconnected Electrical Services Website Design

01.2024

<https://www.netconnected.com.au>

- Connect with customers and understand user needs
- Design UI pages based on customer needs and information provided by customers
- Use html5, CSS and JavaScript for page coding to complete the final product.
- Aftersales service provided
